Kā sagatavot zinātnisko rakstu iesniegšanai augstas kategorijas zinātniskajā žurnālā?

How to prepare scientific paper for the submission to high-ranking scientific journal?

Jeļena Titko, Dr.oec. Ekonomikas un kultūras augstskola Prorektore zinātniskajā darbā

Mācību-metodiskā konference "Mācību metodiskā un zinātniskā darba organizācija studiju procesā", Rīgā, 2016. gada 27. janvārī

Five Reasons to Publish

- 1. You add to the body of knowledge
- 2. You will become a recognized expert in your field
- 3. Your findings will help develop or improve on existing policy
- 4. Your publications will help you advance your career
- 5. You will gain inner satisfaction

You are required ...

Augstskolu likums, VII nodaļa "Zinātniskā pētnecība", 62. pants: "Augstskolas akadēmiskā personāla pienākums ir publicēt savu pētījumu rezultātus"

LR MK Noteikumi nr. 391

"Novērtējot pretendenta atbilstību profesora vai asociētā profesora amatam, ņem vērā pēdējo sešu gadu laikā iegūto zinātnisko un pedagoģisko kvalifikāciju."

What to start with?

With a paper writing?

With a journal selection?

Priority – paper idea or research results! Next step – journal selection

You should know about author's guidelines

Journal selection

SIMPLE:

Use the option to publish the extended version of your paper submitted to the conference

Journal selection

Use journal finder (example: journalfinder.elsevier.com)

Paper title

Enter your paper title here
Paper abstract
Copy and paste your paper abstract here.
Fields of research
Optional: refine your search by selecting up to three research fields

Agriculture Economics GeoSciences Humanities and Arts Mathematics Physics Chemistry Social Sciences

Test of journalfinder.elsevier.com paper:OPERATING INCOME IN RETAIL BANKING: CASE OF LATVIAN AND LITHUANIAN MARKET

High-ranking scientific journal

SNIP (Source-Normalized Impact per Paper) Citations relative to average for discipline; SNIP >1 means journal is cited more than average for field

Impact factor Average citations per publication

How to find the information?

Journal web-page Data bases (Thomson Reuters Web of Science; Scopus) Journal Citation Report (JCR)

Scientific budget

Publikācijas veids

- 1. Raksts žurnālā, kas ir iekļauts Thomson Reuters Web of Science / Scopus datu bāzē
- 2. Raksts žurnālā, kas ir iekļauts EBSCO, ScienceDirect, ProQuest u.c. starptautiskās datu bāzēs
- 3. Raksts zinātniskajā žurnālā ar starptautisko redkolēģiju un ISSN numuru
- 4. Raksts konferenču rakstu krājumos, kas ir iekļauti Thomson Reuters Web of Science / Scopus datu bāzē
- 5. Raksts konferenču rakstu krājumos, kas ir iekļauti EBSCO, ScienceDirect, ProQuest u.c. starptautiskās datu bāzēs

Paper – what to start with?

- Get familiar with the journal. Read some of the recent articles.
- Get familiar with the author's guidelines!
- Upload the template[©]
- Prepare outlines (level 1).
- Visualize all the results (make tables and figures).

Outlines – level 1

- 1. What is the topic of my paper?
- 2. Why is this topic important?
- 3. How could I formulate my hypothesis?
- 4. What are my results?
- 5. What is my major finding?

Prepare your paper

- Title
- Abstract
- Keywords
- JEL classification
- Introduction
- Main body (Literature, Methods, Results, Discussion) Acknowledgement
- References

Outlines – level 2

Introduction

- 1. Why is your research important?
- 2. What is known about the topic?
- 3. What are your hypotheses?
- 4. What are your objectives?

Materials and Methods

- 1. What materials did you use?
- 2. Who were the subjects of your study?
- 3. What was the design of your research?
- 4. What procedure did you follow?

Results

- 1. What are your most significant results?
- 2. What are your supporting results?

Discussion and Conclusions

- 1. What are the studies major findings?
- 2. What is the significance/implication of the results?

Title

The title is the main advertisement for your article. A great title entices the audience to read on; a poorly-titled article may never reach its target readers

Important!

Leave out phrases such as "a study of", "investigations into", "observations on".

Avoid using abbreviations and jargon.

One of the paper evaluation criteria is the title adequacy.

Abstracting and indexing services depend on accurate titles; they extract keywords from them for cross-referencing.

Abstract

Advice from Professor David Gillborn, *Editor of Race Ethnicity and Education:*

"A good abstract will tell you what the key issue that's addressed is, it'll give you an idea of the methods that have been used and the conclusions that have been arrived at.

So that abstract ought to tell someone whether it's worth them spending part of their life reading this paper. "

Short abstract (200-250 words)

PAPER TITLE

Name Surname¹, Name Surname²

¹The name of the institution, Country, e-mail adress ²The name of the institution, Country, e-mail adress

Abstract. The length of the abstract should be approximately 200-250 words. Formatting requirements for the text of the abstract: Times New Roman font, 10 pt, justified, single line spacing. The abstract should reflect the main idea of the study. The abstract should include the following: research relevance, aim of the paper, research methods applied, predicted theoretical and/or practical value of the research. Abstract, abstract,

Keywords: keyword; keyword. (max 5 keywords separated by semicolon)

Type of the paper: Empirical study, Theoretical paper, Methodological paper

JEL Classification: system can be found in the website of American Economic Association: http://www.aeaweb.org/journal/jel_class_system.php

Extended abstract, digest

Click here, type the title of your paper, Capitalize first letter

First Author^a, Second Author^b, Third Author^{a,b,*}

*First affiliation, Address, City and Posicode, Country *Second affiliation, Address, City and Posicode, Country

Abstract (250-300 words)

Purpose of the article Abstract, Abs

Methodology/methods Abstract, Abstra

Scientific aim Abstract, A

Keywords: (5-10 words) keywords, keywords, keywords, keywords, keywords

JEL Classification: M15, M21

"Required Format for Digest"

Name1 Surname1 (organization1), Name2 Surname2 (organization2), Name3 Surname3 (organization3) etc.

Keywords – Indicate up to five keywords or key-phrases exactly as in the full version of your paper.

I. INTRODUCTION

A digest is a compact version of the corresponding full paper, **shortened to one page**. The digest contains full, clear, but, due to the limited volume, less detailed description of the scientific idea presented in the full paper. This document provides instructions for preparing the digests and can be used as a template.

II. GENERAL REGULATIONS

The formatting rules for the digest are basically the same as for the full version of the paper. The differences are discussed later in this document.

Significant feature of the digest is its numbering system of figures, tables, equations and chapters. On one hand these objects must have the same numbers as in the full version, but on the other many of these objects are not included in the digest. This makes the numbering in digests inconsistent. Then authors can refer to all objects either included or not included. Please if these objects are referred, but not included in the digest, indicate their location in the full version (f.v.).

Numbers of chapters are adjusted with "Mouse right click (on numbers) – Set Numbering Value – Continue with previous list – Advance value", but other objects – manually.

A. Identification of Authors

The authors of the paper are indicated just after the paper title formatted with "RTU - Author's Names" (Times New Roman 12pt). No status is indicated and the institution is given in parenthesis only for the first author (applying *italic style*). Do not split the data related to the same author onto two lines. The biographies of the authors are not used in digests.

B. Page Layout

Use the following page setup options: paper size A4; left and right margins = 1.1 cm; top and bottom margins = 1.5 cm; gutter = 0.51 cm. Use two-column layout with column width 8.89 cm and spacing 0.51 cm. Do not number the pages.

C. Type Sizes

Paragraph spacing in digests is slightly different. Differences are specified in Table I in this document. Refer to this table in the full paper version for other options.

> TABLE I TYPE SIZES. SPACES AND INTERV

1 YPE SIZES, SPACES AND INTERVALS					
Text [style]	Size	Before	After		
Paper title [RTU - Title]	24	0	0		
Author's names [RTU - Author's Names]	11	line 6pt line 12			
Section titles [RTU - Heading 1]	10	9	4		
Subheadings [RTU - Heading 2]	10	4	2		
Main text	10	Spacing "Exactly 12pt"			
Figures [RTU - Figures (in)]	10	9	6		
Figure captions [RTU - Figures (Captions)]	8	0	6		
Equations [PTI] - Equations]	10	6	6		

III. OBJECTS

Place only the key objects, necessary for understanding the presented idea. Place them in the logical order, preferably on the top or bottom of page.

A. Figures

Place figures utilizing style "RTU – Figures (in)". Keep their numbers as in the full version of the paper. Long figure captions in digests can be shortened. One line figure captions have to be centered, but others - justified. Refer to part III sections A and C of the full version for more details on figures/images.

B. Tables

Recommended style for the tables is "RTU – Tables (in)". Place only the tables with critical content. Keep the original numbering. If necessary, reduce size of the tables (for instance, Table I). The content of the tables must be equivalent to that in the full version of the paper (Table I in this text is not a typical example due to different spacing in the digest).

D. Equations

Use the Microsoft Equation 3.0 (with type sizes from Fig.2) to create equations and apply "RTU - Equations" style.

Fig. 2. Recommended size definitions for Microsoft Equation Editor.

Keep original numbering. Place one tab before short equations, like (1), to center them.

Refer to Part III Section D in the full version for more details.

IV. OTHER RECOMMENDATIONS

D. Format of References

List only the most important references and number them exactly as in full version (no more than 3). Background (literature) analysis is a significant part of any scientific research and thus cannot be omitted in the digest.

JEL Classification Codes

The *JEL* classification system was developed for use in the *Journal of Economic Literature* (*JEL*), and is a standard method of classifying scholarly literature in the field of economics.

The American Economic Association (AEA) maintains EconLit, a searchable data base of citations for articles, books, reviews, dissertations, and working papers classified by JEL codes for the years from 1969.

Introduction

Move 1. Establish a research territory

Show that the general research area is important, central, interesting, and problematic in some way.

Move 2. Find a niche

Indicate a gap in the previous research, or extend previous knowledge in some way.

Move 3. Occupy the niche

a. Outline **purposes** or state the nature of the present research;

- b. List research questions or hypotheses;
- c. State the method of investigation
- d. Announce principle findings;
- e. State the value of the present research;
- f. Indicate the **structure** of the research paper.

Main text – literature review

The purposes of the review are: to define and limit the problem you are working on to place your study in an historical perspective to avoid unnecessary duplication to evaluate promising research methods to relate your findings to previous knowledge and suggest further research

Avoid lengthy or unfocused reviews of previous research.Cite peer-reviewed scientific literature or scholarly reviews.Avoid general reference works such as textbooks.Define any specialized terms or abbreviations

Main text - Methods

- This section should be detailed enough that readers can replicate your research, and assess whether the methods justify the conclusions.
- Ultimately, you should explain how you studied the problem, identify the procedures you followed, and structure this information as logically as possible.
- If your methods are new, you'll need to explain them in detail. If they've been published before, cite the original work, including your amendments if you've made modifications.

Main text - results

In this section you show how your results contribute to the body of scientific knowledge, so be clear and logical.

Do not interpret your results – that comes in the Discussion & Conclusions section.

You can base the sequence of this text on the tables, figures and graphs that best present your findings.

Main text - Discussions

Move 1. The study's major findings

- a. State the study's major findings.
- b. Explain the meaning and importance of your finding.
- c. Consider alternative explanations of the findings.

Move 2. Research Context

- a. Compare and contrast your findings with those of other published results.
- b. Explain any discrepancies and unexpected findings.
- c. State the limitations, weaknesses, and assumptions of your study.

Move 3. Closing the paper

- a. Summarize the answers to the research questions.
- b. Indicate the importance of the work by stating applications, recommendations, and implications.

Discussion – make sure that:

- your results directly support your conclusions
- you use specific expressions and quantitative descriptions – '12 degrees higher' instead of 'a higher temperature'
- you only discuss what you defined early in the paper – don't introduce the reader to a whole new vocabulary. If you missed an important term, go back to the introduction and insert it
- all interpretations are based on fact, not imagination

Essential Parts of a Scientific Paper

Title: Describe concisely the core contents of the paper Abstract: Summarize the major elements of the paper Introduction: provide context and rationale for the study Materials: Describe the experimental design so it is reproducible

Methods: Describe the experimental procedures
Results: Summarize the findings without interpretation
Discussion: Interpret the findings of the study
Acknowledgement: Give credit to those who helped you
References: List all scientific papers, books and websites that you cited

Acknowledgement

When is obligatory?

- Persons who are not your co-authors contributed in some way to the paper
- Your paper is written within the scope of scientific project

Acknowledgement

- The paper was supported by the National Research Program 5.2.
 "Economic Transformation, Smart Growth, Governance and Legal Framework for the State and Society for Sustainable Development a New Approach to the Creation of a Sustainable Learning Community (EKOSOC-LV)".
- This study was conducted within the scope of the research "Enhancing Latvian Citizens' Securitability through Development of the Financial Literacy" Nr. 394/2012.
- Support for this work was provided by the Riga Technical University through the Scientific Research Project Competition for Young Researchers No. ZP-2013/03.

References

Referencing is a standardized way of acknowledging the sources of information and ideas that you have used in your document. A list of ALL the references used in the text must be written.

Reference style APA

www.apastyle.org

APA Style[®] originated in 1929, when a group of psychologists, anthropologists, and business managers convened and sought to establish a simple set of procedures, or *style rules*, that would codify the many components of scientific writing to increase the ease of reading comprehension.

APA Style rules and guidelines are found in the <u>Publication Manual of the American Psychological</u> <u>Association</u>.

For a brief overview of APA Style, see <u>Free Tutorial: The</u> <u>Basics of APA Style</u>.

Status of your paper

- Revise & Resubmit
- Revise with major revisions
- Revise with minor revisions
- Advice from Professor Len Barton, Editor of Disability and Society:
- "I do think this is important for a number of reasons, but I want to say it, it's important that authors remember that where referees' comments have been helpful, and hopefully they will be helpful because in many ways they are quite detailed and specific, it is appropriate in the revised submission that their contribution is acknowledged in the paper. Very, very few people acknowledge the helpfulness of referees."

Anything aside from simply "reject"

- Accept: "Which almost nobody gets".
- Accept with revision: "Just make some minor changes."
- Revise and resubmit: "They're still interested in you!"
- Reject and resubmit: Though not as good as revise and resubmit, "they still want the paper!

Reviewer list

REVIEW FORM

Title of the paper:

Assessment of the efficiency of selected Slovak insurance by using DEA models

Evaluate the paper by each of the following criterions (please, mark the suitable evaluation) and give a general evaluation:

	General evaluation	Weak	Modest	Average	Good	Excellent
		1	2	3	4	5
1.	Title of the research paper, it's accord to the contents and goals.				x	
2.	Structured abstract (purpose, methodology/methods, scientific aim, findings, conclusions)			х		
2.	Clarity and relevance of the problem			x		
3.	Deepness of scientific problem analysis			х		
4.	Reasoning of main propositions			х		
5.	Validity of the conclusions	х				
6.	Use of international scientific achievements	х				
7.	Evaluation of the research paper structure: consistency, extent, language	x				
8.	Accuracy of the references in the text and in the list of literature	x				
9.	Research goals, object, methods, novelty and key words, pointed out at the beginning of the research paper			x		

Top Reasons for Rejection

- Sent to the wrong journal, does not fit the journal's aims and scope; fails to engage with the issues addressed by the journal; will not be relevant to the readers.
- 2. Not a proper journal article (i.e. more like a thesis chapter or a consultancy report)
- 3. Too long or too short.
- 4. Poor regard to the conventions of the journal or to conventions of academic writing generally.
- 5. Poor English (style, grammar, punctuation)
- 6. Fails to say anything of significance (i.e. Makes no new contribution to the subject) or states the obvious at tedious length.
- 7. Poor theoretical framework (including references to relevant literature).
- 8. Scrappily presented and not proofread, looks like a draft version.

Advices from editors

Margaret Forrest, New Review of Academic Librarianship (NRAL)

- 1. Write to the Editor with an abstract of your proposed article to ask if this would be of interest.
- 2. Look for the journal's "Guidelines for authors" and be sure to follow any instructions, e.g. for the length of article.
- 3. The reviewers for NRAL are asked a number of questions which can help focus their reviews. For example:
 - How informative is the title?
 - Are the objectives of the paper stated?
 - Are the methods of the study and the results clearly described?
 - Does the discussion link theory and practice?
 - Does the paper provide something new?
 - Are the ideas of interest and practical relevance to academic libraries?

Advices from editors

Dr William Miller, The Reference Librarian

1. Please check your spelling and grammar

- 2. Avoid pseudo-scientific words: "utilize" and "use" mean the same thing
- 3. Use active voice: "I did it" is much more effective than "it was done by me."

Advices from editors

Helen Partridge, Australian Library Journal.

- 1. Get familiar with the journal. Read some of the recent articles.
- 2. Make sure you read the author guidelines; make note of the word limit, the referencing style and the formatting requirements.
- 3. Don't be surprised if you are asked to make revisions. The feedback provided by the editor (or the reviewers) is there to help you to improve the quality of your writing.
- 4. Don't take their feedback personally.
- 5. If you have questions or need clarification than contact the editor.
- 6. Stick to the deadlines; return your revised article by the date requested.

Review – Revise & Resubmit

The authors should be complemented on an attempt to make an empirical analysis of the profitability of the banks in Latvia and Lithuania. However, the manuscript suffers from several serious drawbacks. Specifically, the authors should address the following issues:

1) state the contribution of this paper to the field. What is new about this research/ approach?

2) state the problem. What is the problem? Why is it worth studying? Be more specific than declaring that banking sector is "important" to the economy. (p.3).

3) Literature review. Literature review is very superficial. Please, indicate the most relevant findings of the previous research.

4). Fig. 1 should be improved. The legend is not clear in black/white printout. Correct spelling mistakes e.g. Bugaria.

5) Fig. 2. p. 5. "High volatility" is not obvious from this chart. Perhaps, a quarterly data would show the level of volatility.

6) Data and methods. The authors do not provide a clear description of their data-set. (Nor do they provide specific sources, like URL address). According to the subscript "t" in the model one can tell this is a time - series data (authors should state this). Why authors talk about the multicollinearity problem with time -series data. Why report a VIF? What is "N"? According to the description of the data N is 6. 6 years is too short a time-series to perform analysis and draw conclusions. Provide your arguments.

Authors should provide a better description of the data set and of the model. Make table/list of your explanatory variables, indicate the expected sign, and explain why those variables were chosen based on the previous research/ other sources. (it is not enough to provide a correlation table. You have to explain the reasons behind those correlations.). Discuss your results in more detail and depth. Relate them to your statistical analysis.

Conclusion is also superficially written. Report your findings. Explain them. Indicate limitations of your research. Give more thought to the future direction of the research, if it is needed.
